PROGRAM 2: BANKING ENTERPRISE DATABASE

Consider the following database for a banking enterprise.

Branch (branch-name: String, branch-city: String, assets: real)
BankAccount(accno: int, branch-name: String, balance: real)
**BankCustomer** (customer-name: String, customer-street: String, customer-city: String)
Depositer(customer-name: String, accno: int)
Loan (loan-number: int, branch-name: String, amount: real)

i. Create the above tables by properly specifying the primary keys and the
foreign keys.
ii. Enter at least five tuples for each relation.
iii. Find all the customers who have at least two accounts at the *Main* branch (ex.
SBI_ResidencyRoad).
iv. Find all the customers who have an account at *all* the branches located in a
specific city (Ex. Delhi).
v. Demonstrate how you delete all account tuples at every branch located in
a specific city (Ex. Bombay).
INTRODUCTION: This database is developed for supporting banking facilities. Details of the
branch along with the accounts and loans handled by them are recorded. Also details of the
depositors of the corresponding branches are maintained.
